

Cable connections for Lowrance X135 and X136DF, March 25, 2004

Sockets with blue socket nuts, and cable plugs with blue locking collars are NMEA 2000 connection types. The network socket and optional NMEA 2000 buss adapter cable let the unit connect to a NMEA 2000 network. The NMEA 2000 Power cable gives you an option for powering the network. These units cannot transmit NMEA 0183 data and cannot connect to an external speaker. The NMEA 0183 data cable, the NMEA 2000 power cable (when unused) and the white speaker wire should be capped with wire nuts or electrical tape.

This figure corrects the drawings on pages 21 and 25 in the X135/X136DF manual, part 988-0151-171. It is a large-view supplement to the manual's Addendum I, part 988-0151-201.
